

VolunteerHub — Frontend PRD

1. Product Overview

- **Name:** VolunteerHub Thailand
- **Description:** A volunteer activity platform for Thai students and young adults to discover activities, sign up, accumulate verified volunteer hours, and collect digital certificates
- **Problem:** Volunteer opportunities are scattered across social media pages, and volunteer hours are still tracked on paper — making them easy to lose, hard to verify, and difficult to compile for scholarship (กยศ.) or TCAS portfolio applications
- **Target Users:** High school students (TCAS portfolio), university students (scholarship hour requirements), young working adults who volunteer on weekends

2. User Stories

1. As a student, I want to filter activities by category, province, and hours so I can find events I can actually attend
2. As a student, I want to see remaining seats on each activity so I can decide before it fills up
3. As a user, I want the sign-up form pre-filled with my profile so I don't retype my details every time
4. As a parent, I want an emergency contact recorded on every sign-up so I know my child is safe
5. As a student, I want to cancel a registration with a reason so the seat returns to other volunteers
6. As a student, I want to see my hours broken down by category so I know which area to strengthen
7. As a student, I want to download a certificate with a verification code so I can attach it to my scholarship application
8. As a user, I want to see my tier, badges, and monthly rank so I stay motivated to volunteer again

3. Screen Definitions

- **Home:** Welcome banner, featured activities, category shortcuts, monthly goal progress, upcoming registered activities
- **Discover:** Search bar, filter panel (category, province, hours range, date), sort dropdown, result grid with activity cards
- **My Activities:** Tabs for upcoming, completed, and cancelled registrations, with cancel and complete-simulation actions
- **Hours & Certificates:** Four summary stat cards, hours-by-category chart, digital certificate vault, transcript export button

- **Notifications:** Chronological list of activity, certificate, badge, reminder, and system alerts with unread state
- **Leaderboard & Achievements:** Monthly top-3 podium, full ranking table, 4-tier criteria, badge collection grid
- **Profile:** Personal info, institution, skills, interests, volunteer history, and a 5-persona switcher
- **Activity Detail Modal:** Full description, organizer, duties, qualifications, benefits, location, dress code, sign-up button
- **Sign Up Modal:** Pre-filled personal form, emergency contact fields, special needs, terms agreement, validation messages
- **Cancel Confirm Modal:** Reason dropdown and confirmation warning
- **Certificate Preview Modal:** Full-size certificate with number, hours, signatory, and QR verification code
- **Transcript Modal:** Official hour-verification document listing every approved activity with a total

4. UI Components

- Persistent sidebar navigation on desktop (Home, Discover, My Activities, Hours & Certificates, Notifications, Leaderboard, Profile)
- Bottom navigation bar plus hamburger drawer on mobile, sharing one nav definition
- Activity cards with cover image, category badge, hours badge, participant progress bar, and organizer
- Filter panel with multi-select category chips, province dropdown, hours range, and reset button
- Status badges (Open: Teal, Almost Full: Amber, Full: Slate)
- Category color set (Education: Amber, Environment: Teal, Elderly: Rose, Animals: Yellow, Health: Sky, Community: Emerald)
- Tier badges with icon and Thai name (🌱 New, ★ Regular, 🏆 Distinguished, 🏰 Hero)
- Modals for activity detail, sign-up, cancellation, certificate, and transcript
- Form inputs with inline validation messages
- Toast notifications and confetti effect on success
- Progress bars for monthly goal, participant count, and hours-by-category stacked chart
- Empty states with a call-to-action on every list screen
- Skeleton cards for loading state

5. User Flows

Signing Up for an Activity:

1. User browses Home or Discover and clicks an activity card
2. Activity detail modal opens with full information
3. User clicks "สมัครเข้าร่วม" and the sign-up form appears pre-filled from their profile

4. User fills emergency contact and submits — form validates phone, email, and required fields
5. Participant count increases, status flips to "full" if the last seat is taken, a notification is created
6. Confetti and a success toast fire, then the app navigates to My Activities

Completing an Activity and Receiving a Certificate:

1. User opens My Activities and clicks the complete-simulation button on a registered activity
2. System adds the activity's hours to the user's total
3. System recalculates the tier from the hour thresholds defined in the data source
4. A certificate is generated with a number, issue date, signatory, and QR verification link
5. A notification is created and a level-up message appears if the tier changed
6. The certificate immediately appears in the Hours & Certificates vault

Cancelling a Registration:

1. User opens My Activities and clicks cancel on an upcoming activity
2. Confirmation modal opens with a reason dropdown
3. User confirms — registration status becomes "cancelled"
4. Participant count decreases and the activity reopens for sign-ups
5. An info toast confirms the seat was returned to the system

6. Mock Data

All mock data lives in a **single source file**: `src/data/mockData.json`. No component declares its own data — derived values such as the leaderboard and category colors are computed from this file.
